Introduction

The blockchain is a ledger book of a continuous serial chain of information, built according to certain rules, administered and verified simultaneously by all participants of the network. Essentially, Blockchain is a decentralized system ensuring that all network members are equal in their powers. This allows full transparency of records, eliminating the human need to trust other members of the network.

Prior to the invention of the technology of Blockchain, humanity has been reliant on all various types of intermediaries: financial, healthcare, judicial and insurance mediators, etc. This dependency on the current model describes an ongoing loss of time and resources. With the emergence of the Blockchain idea, humanity for the first time has encountered a way to interact with each other without the presence of intermediaries eliminating all possible losses of resources and inefficiencies.

Inspired by this new technology we laid formation to an environment consisting of a decentralized network of cryptocurrency traders: “European Blockchain Assist”. Through the decentralization and transparency of records, we are hoping to put an end to the constantly arising issues of relationships between ‘mentors’ and ‘students’.

The European Blockchain Assist has been formed with a goal to eliminate the information gap in the world of blockchain and cryptocurrency trading and link traders into a uniting web of cryptocurrency, trading and tech expertise where members would feel welcome and empowered.

In the current world of cryptocurrency, we can observe several types of cryptocurrency investors that can be very easily stereotyped: the finance geeks and the tech gurus. In one way or the other, whether an investor is a beginner in the world of cryptocurrencies or an expert trader, they either belong to the clan of finance knowledge or the tech-minded crypto revolutionaries. Arising from the given conclusion, it is not difficult to see that in order to introduce and spark interest from investors of both types, we have to build a bridge, or in other words, a common framework by which both sides would be able to communicate about crypto in a single language of terminology and expertise.

The European Blockchain Assist does not focus on cryptocurrency trading in their entirety, but the promotion of innovative Blockchain solutions through trading and interest of the public.

Current Problems in the Cryptocurrency Trading

Irrelevant information (FUD, P&D ¹)

Lack of financial literacy

Reputation of the industry

Fear of taking a risk and losing

Our Solutions

A non centralized network of traders

A platform that combines all the latest trends

Following a safe path, constant risk-control and elimination

You don't give us money - you control your own money*²

About Us

The European Blockchain Assist is a venture domiciled in Belgium and is engaged in consulting activities in the field of cryptocurrency trading and blockchain. Our main principle is the openness and equality of the network participants therefore providing the quality of their trading education. The form of the network of participants is adopted in a form of a game specially designed for this educational purpose. The Belgian company is established with the prospect of expanding in the European space. In a number of European countries in Western and Eastern Europe, where we have established a stable partnership, EBA has prospects on launching subsidiaries that will further integrate the local atmospheres with the main idea of the Belgian parent company.

Founders of The European Blockchain Assist

Dmitriy Fomenko - the main investor, organizer and the visionary of the company.
